DirectVet

110V SYSTEM

The DirectVet veterinary digital X-ray system combines JPI's robust ExamVue software, easy to install veterinary table, and our high quality, cost effective digital detector. The result is a complete digital x-ray veterinary system that can be set up in only one hour. The JPI DirectVet does not require any special preparations, power supplies, or mounting. The DirectVet system gives you quality digital X-rays quickly, allowing your practice to hit the ground running at an attractive price point.

Digital X-Ray Detector

High-precision, low-error diagnosis. The ExamVue detector with DQE over 40%, and 16-bit dynamic range generates outstanding quality images that help users to reveal the slightest details of the subject.

Boost productivity. Detector is ready to shoot within 5 seconds. Consecutive images are available in seconds, allowing practitioners to boost productivity and client satisfaction.

X-Ray Generator

JPI recommends one of two high frequency portable X-ray generators to appropriately complete the DirectVet system. Permanently mount the CubeX-28 for high power 120kVp imaging. This powerful unit comes complete with soft touch controls, indicator dials, and two-stage, dynamic auto-line compensation running on a standard 110V power supply.

CubeX-16B Option

The CubeX-16B is a 110V battery-powered generator, allowing you to take it off the table and into the field easily. Fully battery powered, it can be used for up to 200 80kVp, 5mAs exposures before needing a recharge. Combine it with an FPD upgrade for the DirectVet system and be able to take your equipment outside or on the road. Control it from the integrated tablet, allowing for detailed control at your fingertips.

ExamVue Software

- Imaging and annotation tools (Window Level, Zoom, Pan, Crop, Invert, Rotation, Angle, Label, Text)
- User Features (Image Stitching, Image Import/Export, Image Comparison, Multi-View, Image Expansion, Full Screen, Auto-Collimation, Reject/Accept)
- Smart Window Level
- DICOM 3.0 Compatibility
- Post Image Processing for each body part
- Automatic

ImageWorksVeterinary

Image-Vet FleXX™

FleXXibility to take dental radiographs anytime...anywhere!

"A dental digital radiography machine is the most profitable piece of equipment in a clinic. There are few patients that don't need dental radiographs. And I can't imagine doing dentistry without them."

- **DR. KATE KNUDSON** *(VETERINARY ECONOMICS - Case Studies: Make sure new equipment earns its keep)*

The neck strap protects the Image-Vet FleXX™ and allows for simple and easy one-handed operation, allowing the user total FleXXibility to operate acquisition software, position the digital sensor or tend to the patient.

The Image-Vet FleXX™ requires NO installation or assembly. Its two rechargeable batteries, neck strap and back scatter shield all fit conveniently in the supplied hard-shelled transport case (not pictured).

The Image-Vet FleXX™ integrates seamlessly with EVA Vet Digital Dental Imaging Systems and can be used with other higher quality digital sensors and high speed dental films. Ask about a package deal for greater savings!

PRODUCT SPECIFICATIONS

- High Frequency 60kV / 2mA
- Compact & Light - only 4 lbs
- Double lead shielding prevents x-ray leakage
- High capacity Lithium-ion battery *(up to 500 shots per charge)*
- Oil-cooled Toshiba tube
- FDA approved for hand-held use
- Generates less harmful radiation than conventional systems

ACCESSORIES

- Neck strap for safety and FleXXibility
- Back scatter shield for user safety
- Two rechargeable battery packs
- Battery charging station
- Hard-shelled transport case included
